

## Up to PL e of EN ISO 13849-1 P2HZ X4P

Two-hand control unit for press controllers and safety circuits

### Approvals

	P2HZ X4P
	◆
	◆
	◆

### Unit features

- ▶ Positive-guided relay outputs:
  - 3 safety contacts (N/O), instantaneous
  - 1 auxiliary contact (N/C), instantaneous
- ▶ Connection options for:
  - 2 operator elements (buttons)
- ▶ LED indicator for:
  - Switch status channel 1/2
  - Supply voltage
- ▶ Plug-in connection terminals (either spring-loaded terminal or screw terminal)
- ▶ See order reference for unit types

### Unit description

The two-hand control relay meets the requirements of EN 574 Type IIIC. It forces the operator to keep his hands outside the danger zone area during the hazardous movement. The unit is suitable for use on controllers for metalworking presses as a component for simultaneous switching.

It can be used in applications with

- ▶ Mechanical presses (EN 692)
- ▶ Hydraulic presses (EN 693)

- ▶ Safety circuits in accordance with EN 60204-1

### Safety features

The two-hand control relay meets the following safety requirements:

- ▶ The circuit is redundant with built-in self-monitoring
- ▶ The safety function remains effective in the case of a component failure
- ▶ The circuit prevents a further press stroke in the case of:
  - Relay failure
  - Contact welding
  - Coil defect on a relay
  - Open circuit
  - Short circuit

### Block diagram

## Up to PL e of EN ISO 13849-1 P2HZ X4P

### Function description

- ▶ The two-hand control relay must be activated by simultaneously pressing two buttons within **500 ms**. If

one or both of the buttons are released, the unit interrupts the control command for the hazardous movement.

- ▶ Reactivation: The output relays will not re-energise until both operator elements have been released and then re-operated simultaneously.

### Timing diagram

### Key

- ▶ POWER: Supply voltage
  - ▶ Button 1/Button 2: Input circuits S11, S21, S32, S33
  - ▶ Feedback loop: Feedback loop Y1-Y2
  - ▶ Output safe: Safety outputs 13-14, 23-24, 33-34
  - ▶ Output aux: Auxiliary contacts 41-42
  - ▶  $t_0$ : Recovery time after power on
  - ▶  $t_1$ : Simultaneity, channel 1 and 2
  - ▶  $t_2$ : Operating cycle ended through button 1 or 2
  - ▶  $t_3$ : Y1-Y2 must be closed before the button is operated (recovery time)
- Shaded area: Status irrelevant

### Wiring

Please note:

- ▶ Information given in the “Technical details” must be followed.
- ▶ Outputs 13-14, 23-24, 33-34 are safety contacts, output 41-42 is an auxiliary contact (e.g. for display).
- ▶ Do **not** use auxiliary contact 41-42 for safety circuits!
- ▶ To prevent contact welding, a fuse should be connected before the output contacts (see technical details).
- ▶ Calculation of the max. cable runs  $I_{max}$  in the input circuit:

$$I_{max} = \frac{R_{lmax}}{R_l / km}$$

$R_{lmax}$  = max. overall cable resistance (see technical details)

$R_l / km$  = cable resistance/km

- ▶ Use copper wire that can withstand 60/75 °C.
- ▶ Sufficient fuse protection must be provided on all output contacts with capacitive and inductive loads.

## Up to PL e of EN ISO 13849-1 P2HZ X4P

### Preparing for operation

▶ Supply voltage

Supply voltage	AC	DC

▶ Input circuit

Input circuit	Single-channel	Dual-channel
Two-hand button <b>with</b> detection of shorts across contacts		

▶ Feedback loop

Feedback loop	
Contacts from external contactors	

▶ Key

S1/S2	Two-hand button
-------	-----------------

## Up to PL e of EN ISO 13849-1 P2HZ X4P

### Terminal configuration

### Installation

- ▶ The safety relay should be installed in a control cabinet with a protection type of at least IP54.
- ▶ Use the notch on the rear of the unit to attach it to a DIN rail.
- ▶ Ensure the unit is mounted securely on a vertical DIN rail (35 mm) by using a fixing element (e.g. retaining bracket or an end angle).

### Notice

The distance of the button connected to the two-hand relay from the nearest danger zone must be large enough that if one of the buttons is released, the dangerous moment is interrupted before the operator can reach into the danger zone (see EN ISO 13855 "The positioning of protective equipment in respect of approach speeds of parts of the human body")

### Dimensions

\* with spring-loaded terminals

## Up to PL e of EN ISO 13849-1 P2HZ X4P

### Notice

This data sheet is only intended for use during configuration. Please refer to the operating manual for installation and operation.

### Service life graph

The service life graphs indicate the number of cycles from which failures due to wear must be expected. The wear is mainly caused by the electrical load; the mechanical load is negligible.

### Example

- ▶ Inductive load: 2 A
  - ▶ Utilisation category: AC15
  - ▶ Contact service life: 400 000 cycles
- Provided the application requires fewer than 400 000 cycles, the PFH value (see technical details) can be used in the calculation.

To increase the service life, sufficient spark suppression must be provided on all output contacts. With capacitive loads, any power surges that occur must be noted. With contactors, use freewheel diodes for spark suppression.

No. stands for order number.

It is essential to consider the relay's service life graphs. The relay outputs' safety-related characteristic data is only valid if the values in the service life graphs are met.

The PFH value depends on the switching frequency and the load on the relay output.  
If the service life graphs are not accessible, the stated PFH value can be

used irrespective of the switching frequency and the load, as the PFH value already considers the relay's B10d value as well as the failure rates of the other components.

All the units used within a safety function must be considered when calculating the safety characteristic data.

### INFORMATION

A safety function's SIL/PL values are **not** identical to the SIL/PL values of the units that are used and may be different. We recommend that you use the PAScal software tool to calculate the safety function's SIL/PL values.

The standards current on **2010-07** apply.
