## Introduction

#### Validity of documentation

This documentation is valid for the product PNOZ 1. It is valid until new documentation is published.

This operating manual explains the function and operation, describes the installation and provides guidelines on how to connect the product.

## Using the documentation

This document is intended for instruction. Only install and commission the product if you have read and understood this document. The document should be retained for future reference.

## **Definition of symbols**

Information that is particularly important is identified as follows:

#### **DANGER!**

This warning must be heeded! It warns of a hazardous situation that poses an immediate threat of serious injury and death and indicates preventive measures that can be taken.

#### **WARNING!**

This warning must be heeded! It warns of a hazardous situation that could lead to serious injury and death and indicates preventive measures that can be taken.

#### **CAUTION!**

This refers to a hazard that can lead to a less serious or minor injury plus material damage, and also provides information on preventive measures that can be taken.

## **NOTICE**

This describes a situation in which the product or devices could be damaged and also provides information on preventive measures that can be taken. It also highlights areas within the text that are of particular importance.

## **INFORMATION**

This gives advice on applications and provides information on special features

## Safety

#### Intended use

The safety relay PNOZ 1 provides a safety-related interruption of a safety circuit.

The safety relay meets the requirements of EN 60947-5-1, EN 60204-1 and VDE 0113-1 and may be used in applications with

- ▶ E-STOP pushbuttons
- Safety gates

The following is deemed improper use in particular

- Any component, technical or electrical modification to the product,
- Use of the product outside the areas described in this manual,
- Use of the product outside the technical details (see Technical details [4] 14]).

#### **NOTICE**

## **EMC-compliant electrical installation**

The product is designed for use in an industrial environment. The product may cause interference if installed in other environments. If installed in other environments, measures should be taken to comply with the applicable standards and directives for the respective installation site with regard to interference.

## Safety regulations

#### Safety assessment

Before using a device it is necessary to perform a safety assessment in accordance with the Machinery Directive.

Functional safety is guaranteed for the product as a single component. However, this does not guarantee the functional safety of the overall plant/machine. In order to achieve the required safety level for the overall plant/machine, define the safety requirements for the plant/machine and then define how these must be implemented from a technical and organisational standpoint.

## Use of qualified personnel

The products may only be assembled, installed, programmed, commissioned, operated, maintained and decommissioned by competent persons.

A competent person is a qualified and knowledgeable person who, because of their training, experience and current professional activity, has the specialist knowledge required. To be able to inspect, assess and operate devices, systems and machines, the person has to be informed of the state of the art and the applicable national, European and international laws, directives and standards.

It is the company's responsibility only to employ personnel who

- Are familiar with the basic regulations concerning health and safety / accident prevention,
- Have read and understood the information provided in the section entitled Safety
- Have a good knowledge of the generic and specialist standards applicable to the specific application.

#### Warranty and liability

All claims to warranty and liability will be rendered invalid if

- The product was used contrary to the purpose for which it is intended,
- Damage can be attributed to not having followed the guidelines in the manual,
- Operating personnel are not suitably qualified,
- Any type of modification has been made (e.g. exchanging components on the PCB boards, soldering work etc.).

#### **Disposal**

- In safety-related applications, please comply with the mission time T<sub>M</sub> in the safety-related characteristic data.
- When decommissioning, please comply with local regulations regarding the disposal of electronic devices (e.g. Electrical and Electronic Equipment Act).

#### For your safety

The unit meets all the necessary conditions for safe operation. However, please note the following:

Note for overvoltage category III: If voltages higher than low voltage (>50 VAC or >120 VDC) are present on the unit, connected control elements and sensors must have a rated insulation voltage of at least 250 V.

## **Unit features**

- Positive-guided relay outputs:
  - 3 safety contacts (N/O), instantaneous
  - 1 auxiliary contact (N/C), instantaneous
- Connection options for:
  - E-STOP pushbutton
  - Safety gate limit switch
  - Start button
- LED display for:
  - Supply voltage
  - Switch status of the safety contacts
- See order reference for unit types

## Safety features

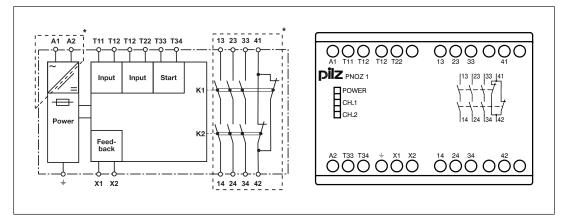

The safety relay meets the following safety requirements:

- The circuit is redundant with built-in self-monitoring.
- > The safety function remains effective in the case of a component failure.
- The correct opening and closing of the safety function relays is tested automatically in each on-off cycle.

## Block diagram/terminal configuration

## Types: AC

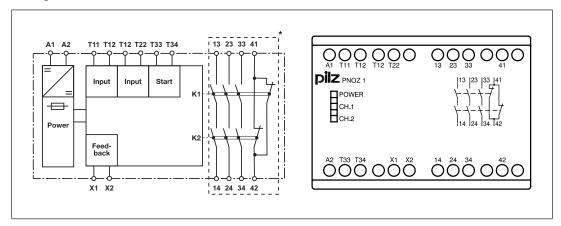

- U<sub>B</sub>: 24 VAC; Order no. 775600
- U<sub>B</sub>: 48 VAC; Order no. 775620
- U<sub>B</sub>: 110 120 VAC; Order no. 775630
- U<sub>B</sub>: 230 240 VAC; Order no. 775650

<sup>\*</sup>Insulation between the non-marked area and the relay contacts: Basic insulation (over-voltage category III), Protective separation (overvoltage category II)

## Type: DC

U<sub>B</sub>: 24 VDC; Order no. 775695

<sup>\*</sup>Insulation between the non-marked area and the relay contacts: Basic insulation (over-voltage category III), Protective separation (overvoltage category II)

## **Function Description**

The safety relay PNOZ 1 provides a safety-oriented interruption of a safety circuit. When supply voltage is supplied the "POWER" LED is lit. The unit is ready for operation when the feedback loop X1-X2 and the start circuit T33-T34 are closed.

- Input circuit is closed (e.g. E-STOP pushbutton not operated):
  - The LEDs "CH.1" and "CH.2" are lit.
  - Safety contacts 13-14, 23-24 and 33-34 are closed, auxiliary contact 41-42 is open.
     The unit is active.
- Input circuit is opened (e.g. E-STOP pushbutton operated):
  - The LEDs "CH.1" and "CH.2" go out.
  - Safety contacts 13-14, 23-24 and 33-34 are opened redundantly, auxiliary contact 41-42 is closed.

#### **NOTICE**

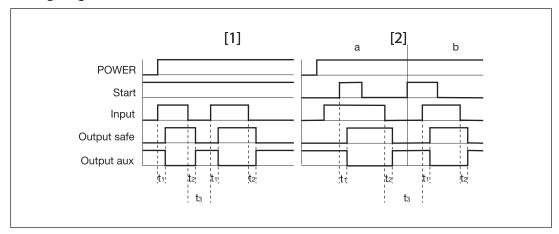

If the safety requirement (e.g. E-STOP pushbutton operated) is triggered < 6 s after starting, the delay-on de-energisation of the instantaneous safety contacts may be increased (see Technical details [4] 14]).

## **Operating modes**

- Single-channel operation: No redundancy in the input circuit, earth faults in the start and input circuit are detected.
- Dual-channel operation without detection of shorts across contacts: Redundant input circuit, detects PNOZ 1
  - earth faults in the start and input circuit,
  - short circuits in the input circuit.
- Automatic start: Unit is active once the input circuit has been closed.

- Manual start: Unit is active once the input circuit and the start circuit are closed.
- Increase in the number of available contacts by connecting contact expander modules or external contactors/relays.

## **Timing diagram**

## Legend

Power: Supply voltage

Start: Start circuit

Input: Input circuit

Output safe: Safety contacts

Output aux: Auxiliary contact

[1]: Automatic start

[2]: Manual start

a: Input circuit closes before start circuit

b: Start circuit closes before input circuit

t₁: Switch-on delay

t<sub>2</sub>: Delay-on de-energisation

t<sub>3</sub>: Recovery time

## Installation

- The unit should be installed in a control cabinet with a protection type of at least IP54.
- Use the notch on the rear of the unit to attach it to a DIN rail (35 mm).
- When installed vertically: Secure the unit by using a fixing element (e.g. retaining bracket or end angle).

## Wiring

#### Please note:

- Information given in the "Technical details [ 14] must be followed.
- Outputs 13-14, 23-24, 33-34 are safety contacts; output 41-42 is an auxiliary contact (e.g. for display).
- Auxiliary contact 41-42 should not be used for safety circuits!

- Do not connect undesignated terminals.
- To prevent contact welding, a fuse should be connected before the output contacts (see Technical details [4]).
- Calculation of the max. cable length I<sub>max</sub> in the input circuit:

$$I_{max} = \frac{R_{lmax}}{R_l / km}$$

 $R_{lmax}$  = max. overall cable resistance (see Technical details [ 14])  $R_l$  / km = cable resistance/km

- ▶ Use copper wire that can withstand 60/75 °C.
- Do not switch low currents using contacts that have been used previously with high currents.
- Sufficient fuse protection must be provided on all output contacts with capacitive and inductive loads.
- On 24 VDC devices:

The power supply must comply with the regulations for extra low voltages with protective electrical separation (SELV, PELV) in accordance with VDE 0100, Part 410.

▶ Ensure the wiring and EMC requirements of EN 60204-1 are met.

## **Preparing for operation**

| Supply voltage | AC  | DC      |
|----------------|---|---------|
|                | A1 \$\dagger\$ L1   | Λ1¢——L+ |
|                | A2 \$\frac{1}{2}  N   |         |
|                | <u></u> | A2 - L- |

| Input circuit   | Single-channel       | Dual-channel    |
|---|----------------------|-----------------|
| E-STOP without detection of shorts across contacts      | T11 0 T12 0 T22 0    | T11 0 S1 TH     |
| Safety gate without detection of shorts across contacts | T11 0 S1 T12 0 T22 0 | T11 S1 S2 T12 C |

## **NOTICE**

With single-channel wiring the safety level of your machine/plant may be lower than the safety level of the unit (see Safety characteristic data [ 23]).

|                                    | E-STOP wiring (single-channel, dual-channel) |   |
|------------------------------------|--|---|
| Start circuit                      | Safety gate (single-channel)                 | Safety gate (dual-channel)  |
| Automatic start                    | T33 ¢  | T33 ¢   |

## **NOTICE**

In the event of an automatic start or manual start with bridged start contact (fault):

The unit starts up automatically when the safeguard is reset, e.g. when the E-STOP pushbutton is released. Use external circuit measures to prevent an unexpected restart.

| Feedback loop                             | without feedback loop monitor-<br>ing | With feedback loop monitoring |
|---|---------------------------------------|-------------------------------|
| Link or contacts from external contactors | X1 ¢                                  | X1                            |

#### Legend

S1/S2: E-STOP/safety gate switch

S3: Reset button

> 1: Switch operated

▶ I: Gate open

▶ **1**: Gate closed

## Operation

When the relay outputs are switched on, the mechanical contact on the relay cannot be tested automatically. Depending on the operational environment, measures to detect the non-opening of switching elements may be required under some circumstances.

When the product is used in accordance with the European Machinery Directive, a check must be carried out to ensure that the safety contacts on the relay outputs open correctly. Open the safety contacts (switch off output) and start the device again, so that the internal diagnostics can check that the safety contacts open correctly

- for SIL CL 3/PL e at least 1x per month
- for SIL CL 2/PL d at least 1x per year

#### **NOTICE**

The safety function should be checked after initial commissioning and each time the plant/machine is changed. The safety functions may only be checked by qualified personnel.

## Status indicators

LEDs indicate the status and errors during operation:

POWER
Supply voltage is present.

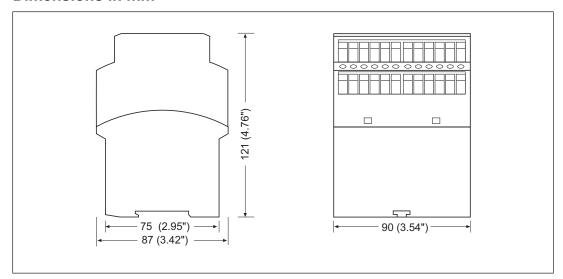

CH.1
Safety contacts of channel 1 are closed.

CH.2
Safety contacts of channel 2 are closed.

## Faults - Interference

- Earth fault: The supply voltage fails and the safety contacts open. Once the cause of the respective fault has been rectified and the supply voltage is switched off for approx. 1 minute, the unit is ready for operation again.
- Contact malfunctions: If the contacts have welded, reactivation will not be possible after the input circuit has opened.
- ▶ LED "POWER" does not light: Short circuit or no supply voltage.

## Safety characteristic data

#### **NOTICE**

You must comply with the safety characteristic data in order to achieve the required safety level for your plant/machine.

| Operating mode | EN ISO<br>13849-1:<br>2015 | EN ISO<br>13849-1:<br>2015 | EN 62061<br>SIL CL | EN 62061<br>PFH <sub>D</sub> [1/h] | IEC 61511<br>SIL | IEC 61511<br>PFD | EN ISO<br>13849-1:<br>2015 |
|----------------|----------------------------|----------------------------|--------------------|------------------------------------|------------------|------------------|----------------------------|
|                | PL                         | Category                   |                    |                                    |                  |                  | T <sub>м</sub> [year]      |
| _              | PL e                       | Cat. 4                     | SIL CL 3           | 2,31E-09                           | SIL 3            | 2,03E-06         | 20                         |

All the units used within a safety function must be considered when calculating the safety characteristic data.

#### **INFORMATION**

A safety function's SIL/PL values are **not** identical to the SIL/PL values of the units that are used and may be different. We recommend that you use the PAScal software tool to calculate the safety function's SIL/PL values.

## Supplementary data

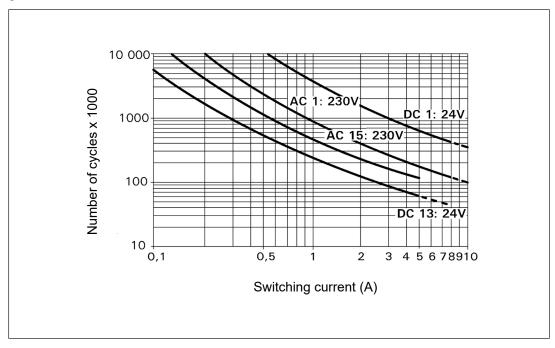

#### **CAUTION!**

It is essential to consider the relay's service life graphs. The relay outputs' safety-related characteristic data is only valid if the values in the service life graphs are met.

The PFH value depends on the switch frequency and the load of the relay output. If the service life graphs are not accessible, the stated PFH value can be used irrespective of the switch frequency and the load, as the PFH value already considers the relay's B10d value as well as the failure rates of the other components.

## Service life graph

The service life graphs indicate the number of cycles from which failures due to wear must be expected. The wear is mainly caused by the electrical load; the mechanical load is negligible.

## Example

Inductive load: 0.2 A

Utilisation category: AC15

Contact service life: 4 000 000 cycles

Provided the application to be implemented requires fewer than 4 000 000 cycles, the PFH value (see Technical details) can be used in the calculation.

To increase the service life, sufficient spark suppression must be provided on all output contacts. With capacitive loads, any power surges that occur must be noted. With DC contactors, use flywheel diodes for spark suppression.

## Order reference

| Product type | Features      | Connection type | Order No. |
|--------------|---------------|-----------------|-----------|
| PNOZ 1       | 24 VAC        | Screw terminals | 775 600   |
| PNOZ 1       | 48 VAC        | Screw terminals | 775 620   |
| PNOZ 1       | 110 – 120 VAC | Screw terminals | 775 630   |
| PNOZ 1       | 230 – 240 VAC | Screw terminals | 775 650   |
| PNOZ 1       | 24 VDC        | Screw terminals | 775 695   |

# EC declaration of conformity

This product/these products meet the requirements of the directive 2006/42/EC for machinery of the European Parliament and of the Council. The complete EC Declaration of Conformity is available on the Internet at www.pilz.com/support/downloads. Representative: Norbert Fröhlich, Pilz GmbH & Co. KG, Felix-Wankel-Str. 2, 73760 Ostfildern, Germany

Pilz develops environmentally-friendly products using ecological materials and energy-saving technologies. Offices and production facilities are ecologically designed, environmentally-aware and energy-saving. So Pilz offers sustainability, plus the security of using energy-efficient products and environmentally-friendly solutions.
